CONTROL AUTOMÁTICO

LUIS DIEGO MORA BARBOZA

TAREA #8

II CAUTRIMESTRE, 2018

- 1) Valor final ante un escalón.
- 2) Incremento en 20%.

$$G(s) = \frac{1}{(s+4)(s+6)}$$

$$\lim_{s \to 0} s * \frac{1}{(s+4)(s+6)} * \frac{1}{s}$$

$$\frac{1}{24} = 0.04$$

 e_{ss}

$$e_{ss} = \frac{1}{1 + \frac{1}{24}}$$

$$e_{ss} = 0.96$$

 \mathbf{k}_{p}

$$error = \frac{1}{1+kp} = 0.0416$$

Valor aumentado en 20 %

$$\frac{1}{24}$$
 * 1,20 = 0,05

 \mathbf{k}_{p}

error =
$$1 - \text{valor final} = 1 - 0.05 = 0.95$$

$$error = \frac{1}{1 + kp} = 0.0526$$

z y p del nuevo compensador

$$kpn = \frac{z}{p} * kpv \to 0.0526 = \frac{z}{1} * 0.0416 \to z = 1.263 \quad p = 1$$
